3 Safety Instruction

Please read the following safety notices before installing or using this unit. They are crucial for the safe and reliable operation of the device.

• Please use the external power supply that is included in the package. Other power supply may cause damage to the phone and affect the behavior or induce noise.

• Before using the external power supply in the package, please check the home power voltage. Inaccurate power voltage may cause fire and damage.

• Please do not damage the power cord. If power cord or plug is impaired, do not use it because it may cause fire or electric shock.

• Do not drop, knock or shake the phone. Rough handling can break internal circuit boards.

• This phone is design for indoor use. Do not install the device in places where there is direct sunlight. Also do not put the device on carpets or cushions. It may cause fire or breakdown.

- Avoid exposure the phone to high temperature or below 0°C or high humidity.
- Avoid wetting the unit with any liquid.

• Do not attempt to open it. Non-expert handling of the device could damage it. Consult your authorized dealer for help, or else it may cause fire, electric shock and breakdown.

• Do not use harsh chemicals, cleaning solvents, or strong detergents to clean it. Wipe it with a soft cloth that has been slightly dampened in a mild soap and water solution.

• When lightning, do not touch power plug, it may cause an electric shock.

• Do not install this phone in an ill-ventilated place. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents.

4 Overview

4.1 Overview

The i56A is a 10.1 inch indoor station, built-in Bluetooth 5.0 and 2.4G/5G Wi-Fi, integrated with Micro USB and TF interface. Based on Android 9.0 operating system, the interface operation is smooth and intelligent. It is mainly used in residential area, villa, office buildings and other places for receiving calling and communicating through the door phone and open the door remotely. It can provide reliable security assurance and the easy access control service for the users, creating a safe and comfortable living environment.

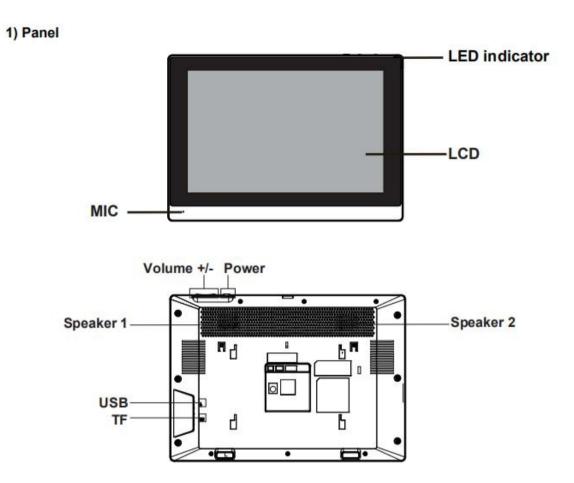

In order to help some users who are interested to read every detail of the product, this user manual is provided as a user's reference guide. Still, the document might not be up to date with the newly release software, so please kindly download updated user manual from Fanvil website, or contact with Fanvil support if you have any question using i56A.

4.2 Product Introduction

4.2.1 i56A Physical specifications

1) Panel description

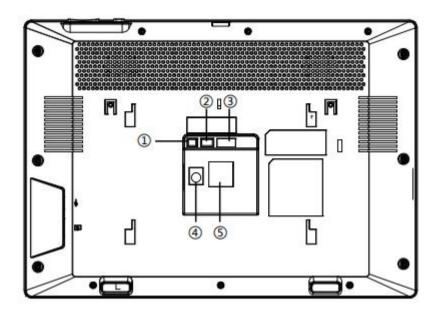

Picture 1 -Panel description

2) Interface description

There are some interfaces on the back of the device for connecting power supply, alarms etc. The connections are as follows:

Picture 2 -Interface Description

Table 1 - Interface Description

No.	Description	Interface
1	1 set of RS485 interface: can be connected to card reader, sensor etc.	
2	2 sets of short-circuit output interfaces: corresponding to the short-circuit input interface, login device webpage settings, can be connected to electric locks, alarms etc.	Logic 0 0 0 N02 C0M2 NC2 0 0 N01 C0M1 NC1
3	8 sets of alarm input interfaces: input devices for connecting switches, infrared sensor, door sensor, vibration sensors etc.	Alarm Input
4	Power interface: 12V/1A input.	()
5	Ethernet interface: standard RJ45 interface, 10/100M adaptive, it is recommended to use CAT5 or CAT5E network cable.	\square

3) External device connection diagram

Picture 3 -External device connection diagram

5 Install Guide

5.1 Use PoE or external Power Adapter

I56A, called as 'the device' hereafter, supports two power supply modes, power supply from external power adapter or over Ethernet (PoE) complied switch.

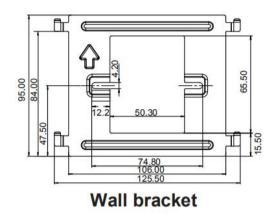

PoE power supply saves the space and cost of providing the device additional power outlet. With a PoE switch, the device can be powered through a single Ethernet cable which is also used for data transmission. By attaching UPS system to PoE switch, the device can keep working at power outage just like traditional PSTN telephone which is powered by the telephone line.

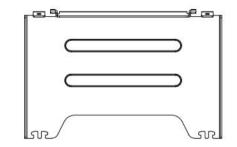

For users who do not have PoE equipment, the traditional power adaptor should be used. If the device is connected to a PoE switch and power adapter at the same time, the power adapter will be used in priority and will switch to PoE power supply once it fails.

Please use the power adapter supplied by Fanvil and the PoE switch met the specifications to ensure the device work properly.

5.2 Installation (two models)

Desktop bracket

Picture 4 -Equipment Support

Model 1. Wall-mounted Installation

Step 1. Install wall bracket

Without 86 embedded box in the wall

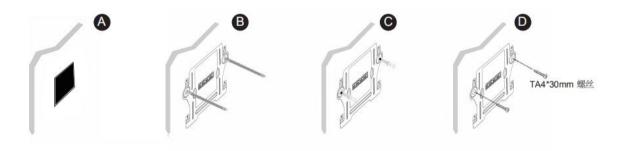

A. According to the position of the cable in the wall, dig out a square hole

(height*width*depth=65.5*50.5*50mm) that can accommodate all cables.

B. Align the square hole of the wall bracket with the hole digged out before, then mark the two fixation holes through bracket on the wall.

C. Take down the bracket, using an electric drill to make the two fixation holes on the wall, then insert the two screw fixing seats provided.

D. Fix the wall bracket on the wall with two TA4*30 screws.

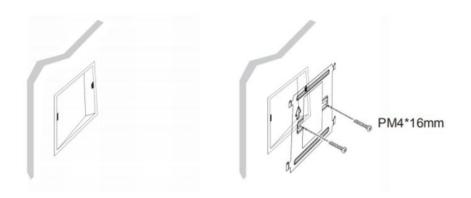

Picture 5 -Wall Mount 1

With 86 embedded box in the wall

A. Make sure all cables in the embedded box .

B. Fix the wall bracket on the 86 embedded box with two PM4*16mm screws.

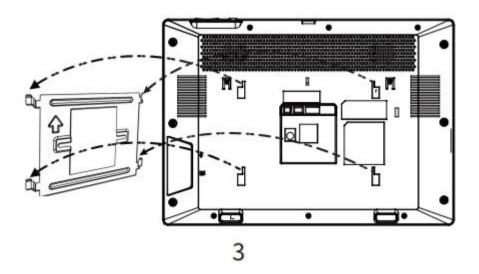

Picture 6 -Wall Mount 2

Step 2. Connect peripherals

A. If you need to connect other input and output devices, please connect to the host through the cable.

Step 3. Power on the device. If it is working properly, align the slot on the rear side of the panel with the pin on the wall bracket and slide the host down to complete the installation.

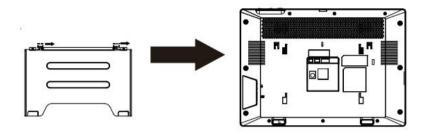

Picture 7 - Connecting to the Device

Model 2. Desktop Installation

Align the slot on the rear side of the panel with the pin on the desktop bracket and slide

the bracket up to complete the installation.

Picture 8 - Desktop phone installation

7 Introduction to the User

7.1 Idle Screen

Picture 9 -Default home screen

The image above shows the default standby screen, which is the user interface in the most of the time.

The main screen displays the frequently used function menu buttons of the device. It is also the first layer of the function menu buttons. Users can operate the phone through them

7.2 View device IP

There are two ways to check the device IP. The default WAN mode is DHCP. method 1: After powering on, click [Settings] >> [Common] to query. Method 2: After starting, pull down the notification bar to query.

7.3 Dial

Dial:

The user can press the dialer key to dial, and the sound will be played from the speaker. Line dial:

The user can also use the line key to specify the line to make/receive calls.

7.4 Screen Touch Instructions

The device can be configured and operated by touching the screen.

Click

The device can enter the setting and operation interface by clicking on any interface. The device supports multi-touch.

Long Press

Long press the app icon on the standby home page, you can adjust the app location or choose to delete.

Long press the application icon in the menu interface to drag it to the main page.

Slide

The device supports sliding up and down.

Slide down the standby home page to view the network connection information, date time and other information of the device;Slide up to exit the above information interface. Right slide can expand DSSkey, full screen display custom shortcut key information;Slide left to exit the above interface.

Drag

Long press the application icon in any interface, and you can drag it to any place.

7.5 Phone Status

The phone status includes the following information about the phone:

Network Status:

IPv4

IP Address

Network Mode

Mac Address

• The Phone Device Information: Phone Mode

Hardware Version number Software Version number Phone Storage (RAM and ROM) System Running Time Android Version

SIP Account Information:
 SIP Account
 SIP Account Status (registered / uncommitted / trying / time out)

The user can view the phone status through the phone interface and the web interface.

• Phone interface: When the phone is in standby mode, press [Menu] >> [Status] and select the option to view the corresponding information, as shown in the figure:

Picture 12 - Landing page

Users must correctly enter the user name and password to log in to the web page. The default user name and password are "admin". For the specific details of the operation

page, please refer to page <u>11 Web configurations</u>.

7.7 Network Configurations

The device supports two kinds of network connection modes: wired network connection and wireless network connection. This section describes the wired network connection. For wireless network connection, refer to <u>10.5 wi-fi</u>.

The device relies on IP network connection to provide service. Unlike traditional phone system based on a circuit switched wire technology, IP devices are connected to each other over the network and exchange data in packet basis based on the devices' IP address.

To enable this phone, you must first correctly configure the network configuration. To configure the network, users need to find the phone function menu button [Settings] >>] Advanced]>> [Network] >> [Ethernet].

NOTICE! If user saw a WAN Disconnected' icon flashing in the middle of screen, it means the network cable was not correctly connected to the device's network port. Please check the cable is connected correctly to the device and to the network switch, router, or modem.

The device supports IPv4.

There are two common IP configuration modes about IPv4.

- Dynamic Host Configuration Protocol (DHCP) This is the automatic configuration mode by getting network configurations from a DHCP server. Users need not to configure any parameters manually. All configuration parameters will be getting from DHCP server and applied to the device. This is recommended for most users.
- Static IP Configuration This option allows user to configure each IP parameters manually, including IP Address, Subnet Mask, Default Gateway, and DNS servers. This is usually used in an office environment or by power users.

The device is default configured in DHCP mode.

Please see <u>10.7.2.1 network Settings</u> for detailed configuration and use.

7.8 SIP Configurations

A line must be configured properly to be able to provide telephony service. The line configuration is like a virtualized SIM card. Just like a SIM card on a mobile phone, it stores the service provider and the account information used for registration and

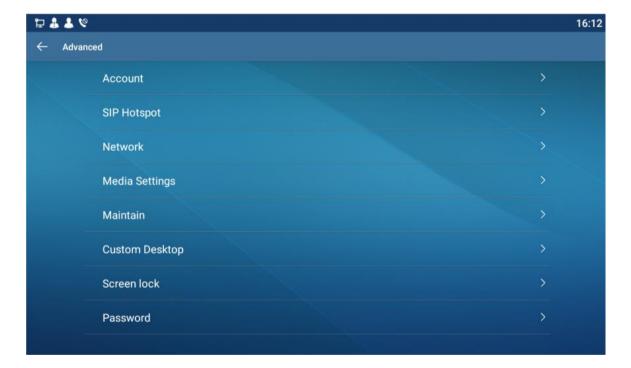

authentication. When the device is applied with the configuration, it will register the device to the service provider with the server's address and user's authentication as stored in the configurations.

The user can conduct line configuration on the interface of the phone or the webpage, and input the corresponding information at the registered address, registered user name, registered password and SIP user, display name and registered port respectively, which are provided by the SIP server administrator.

Phone interface: To manually configure a line, the user can press the button in the function menu [Settings] >> [Advanced]>>[Account] >> [Line] configuration, click "OK" to save the configuration.

NOTICE! User must enter correct PIN code to be able to advanced settings to edit line configuration. (The default PIN is admin)

The parameters and screens are listed in below pictures.

8 **Basic Function**

8.1 Making Phone Calls

Default Line

The device provides six line services. If all lines are configured, user can make or receive phone calls on either line. If default line is configured by user, there will be a default line to be used for making outgoing call which is indicated on the top left corner. To use the default line, user can press [**Settings**] >> [**Call**] >> [**Call**] or configure from Web Interface (Web / PHONE / Features / Basic Settings).

1388 🔁 👗 🌡	9 1		17:20

	Default dial mode	Video	
	Default ans mode	Video	
	Allow IP call		
	Caller Name Priority	LocalContact-NetContact-SIP DisplayName	

Picture 16 - Default line

Dialing Methods

User can dial a number by,

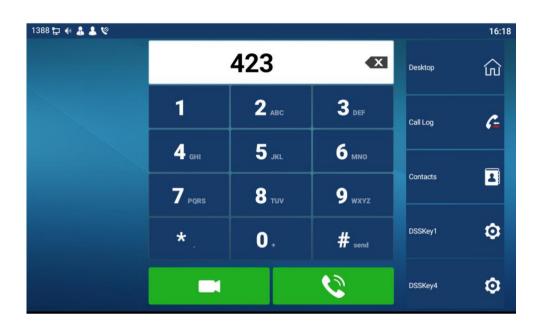

- Entering the number from dialer
- Selecting a phone number from phonebook contacts (Refer to <u>10.2.1 Local</u> <u>contacts</u>)
- Selecting a phone number from cloud phonebook contacts (Refer to <u>10.2.3</u> <u>Cloud Phone Book</u>)
- Selecting a phone number from call logs (Refer to <u>10.3 Call Log</u>)

Dial Number

To make a phone call, user can firstly dial a number by one of the above methods. When the dialed number is completed, user can press [**Dial**] button on the soft-menu to call out

with the default line.

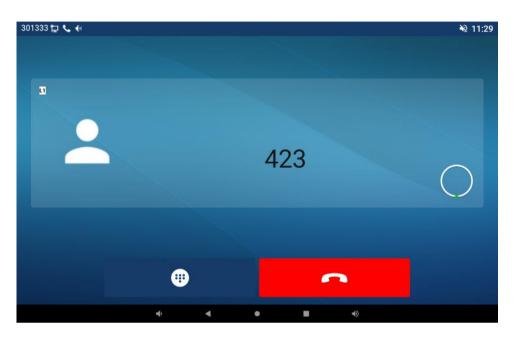

Picture 17 - Dial number

Cancel Call

While calling the number, user can press to end the call with [**End**] button.

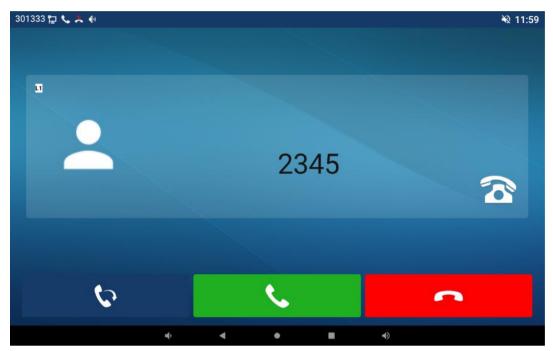

Picture 18 - Call number

8.2 Answering Calls

when the phone is idle and there is a call, the user will see the call reminder screen as below.

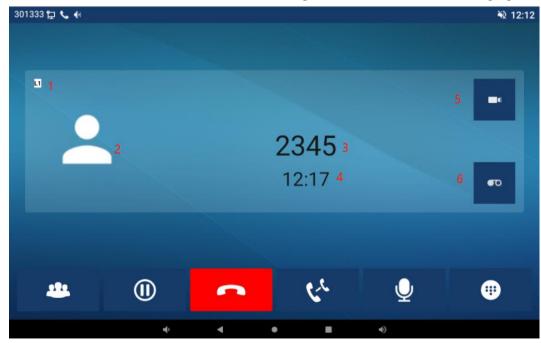

Picture 19 - Answering calls

User can answer the call by press the **[Answer]** button. To divert the incoming call, user should press **[Divert]** button. To reject the incoming call, user should press **[Reject]** button.

8.2.1 Talking

When the call is connected, user will see a talking mode screen as the following figure.

Picture 20 - Talking interface

Table 9 - Talking mode

Number	Name	Description
1	The current line	The line currently used by the phone.
	User avatar	Default display, user can customize the selection of
2	User avalar	avatar pictures.
	Calls to end	The name or number of the person on the other end of
3		the call.
4	Call duration	The duration of a call after it has been established.
5	Video icon	Click to initiate video call.
6	Record icon	Click start recording and click end recording again.

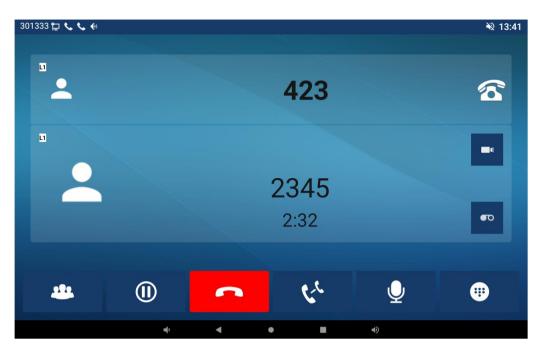

8.2.2 Make / Receive the Second Call

The device can support up to multiple calls. When there is already a call established, user can still answer another incoming call on either lines or make a second call on either lines.

■ The Second Incoming Call

When there is another incoming call during talking a phone call, this call will be waiting for user to answer it. User will see the call message in the middle of current screen. The device will not be ringing but playing call waiting tone in the audio channel of the current call. User can accept or reject the call as same as normal incoming call. When the waiting call is answered, the first call will be put on hold automatically.

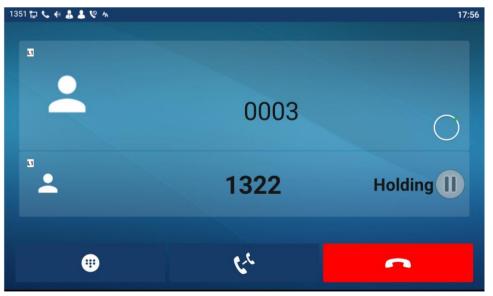

Picture 21 - The second call interface

Second Outgoing Call

To make a second call, user may press [Xfer] / [Conf] button to make a new call on the default line. Then dial the number the same way as making a phone call. Another alternative for making second call is to pressing DSS Keys dial out from the configured Keys (BLF/Speed Dial). When the user is making a second call with the above methods, the first call could be placed on hold manually first or will be put on hold automatically at second dial.

Switching between Two Calls

When there are two calls established, user will see a dual calls screen as the following picture.

Picture 22 - Two way calling

User can switch screen page by touch the screen, and switch call focus by pressing [**Resume**] button.

Ending One Call

User may hang up the current talking call by press [**End**] button. The device will return to single call mode in holding state.

8.3 End of the Call

After the user finishes the call, the user can press softkey [End] key to end the call.

8.4 Video Call

i56A supports a variety of video formats QVGA,CIF,VGA,4CIF,720P,1080p. The device only supports video decoding, but users can initiate video calls.

- The default dialing mode is video. When the device dials, it USES video mode to call out by default. If the end device supports sending video, both sides establish video call.
- The default dialing mode is voice. The above operation establishes voice call

Picture 23 - Video interface

8.5 Redial

 Redial the last outgoing number: Set the function key as redial key. When the phone is in standby mode, press the redial key to call out the last number dialed.

8.6 Dial-up Query

Phone is defaulted to open the dial-up inquiry function, dial-out, enter two or more Numbers, dial the interface will automatically match call records, contacts in the number list, touch the number that you select to call out.

8.7 Auto-Answering

User may enable auto-answering feature on the device and any incoming call will be automatically answered (not including call waiting). The auto-answering can be enabled on line basis.

The user can enable the automatic answer function in the telephone interface or the webpage interface.

• Phone interface:

Press [Settings] >>[Advanced]>> [Account] >> [Line] ;

Press the button to select the line and enter the [**Basic Settings**]. Click on/off the auto answering option and set the auto answering time. The default is 5 seconds.The icon in

the upper left corner of the screen indicates that auto answer is enabled.

Picture 29 - Mute the call

• Cancel mute: press cancel mute on the phone again. The mute icon is no longer displayed in the call screen.

8.9.2 Ringing Mute

- Mute: press the mute button when the phone is ringing: Ψ
- The top right corner of the phone shows the bell mute icon, when there is an incoming call, the phone will display the incoming call interface but will not ring.

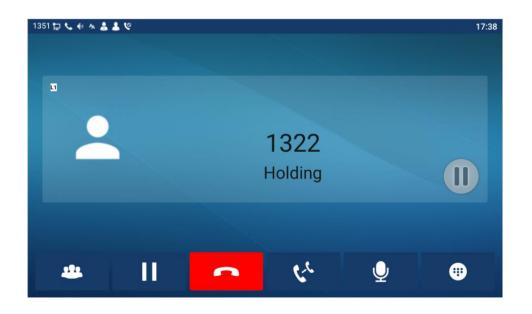

Picture 30 - Ringing mute

Cancel ring tone mute: On the incoming call screen, press the mute button again or volume up + button to cancel ring tone mute. It will no longer shows mute icon in upper right corner after cancel. The phone mute icon is off

8.10 Call Hold/Resume

The user can press the [Hold] button to maintain the current call, and this button will become the [**Resume**] button, and the user can press the [**resume**] button to restore the call.

Picture 31 - Call hold interface

8.11 DND

User may enable Do-Not-Disturb (DND) feature on the device to reject incoming calls (including call waiting). The DND can be enabled on line basis. Enable/Disable phone all lines DND, Methods the following:

- Phone interface: Default standby mode,
 - 1) In standby, press the [Do Not Disturb] button to turn on the DND function of the

phone, the DND icon on the phone screen will turn red [], and the phone status prompt bar will have the DND icon.

 Press the [Do Not Disturb] button again to turn off Do Not Disturb, the DND icon on the phone screen will change back , and the DND icon in the phone

on the phone screen will change back []], and the DND icon in the phone status prompt bar disappears.

Picture 32 - Enable DND

If the user wishes to enable/disable the uninterrupted function on a specific line, the user can set the uninterrupted function on the page of configuring the line.

- 1) Press [**Settings**] >>[**DND**] button, Enter the [**DND**] editing interface.
- 2) select the line to adjust the mode and state of "do not disturb".
- 3) The user will see the DND icon turn red, and the sip-line has enabled the mode of "DND".

8.13 Call Transfer

When the user is talking with a remote party and wish to transfer the call to another remote party, there are three ways to transfer the call, blind transfer, attended transfer and Semi-Attended transfer.

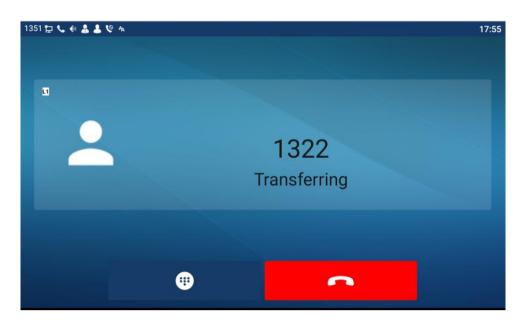

- Blind transfer: Do not need to negotiate with the other side, directly transfer the call to the other side.
- Semi-Attended transfer.: When you hear the ring back, transfer the call to the other party.
- Attended transfer: When the caller answers the call, transfer the call to the caller.

Note ! For more transfer Settings, please refer to <u>12.5Line >> Dial Plan</u>.

8.13.1 Blind transfer

During the call, the user presses the function menu button [**Transfer**], enter the number to transfer, press the transfer key again to a third party. After the third party rings, the phone will show that the transfer is successful and hang up.

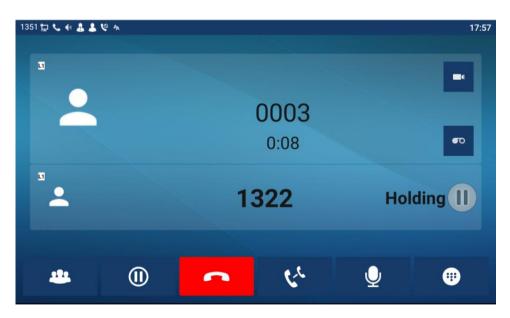

Picture 40 - Transfer interface

8.13.2 Semi-Attended transfer

During the call, the user presses the function menu button [**transfer**] to input the number to be transferred, and then press the call button. When the third party is not answered, press the transfer on the call interface to make the semi-attendance transfer or press the end button to cancel the semi-attendance transfer.

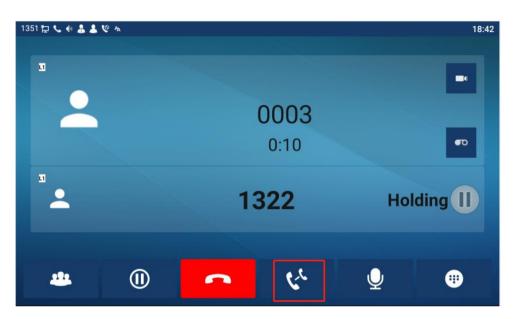

Picture 41 - Semi-Attended transfer

8.13.3 Attended transfer

Attendance transfer is also known as "courtesy mode", which is to transfer the call by calling the other party and waiting for the other party to answer the call.

Calling is the same procedure. In dual call mode, press the "transfer" button to transfer the first call to the second call.

Picture 42 - Attended transfer

8.14 Call Waiting

- Enable call waiting: new calls can be accepted during a call.
- Disable call waiting: new calls will be automatically rejected and a busy tone will be prompted.
- Enable call waiting tone: when you receive a new call on the line, the tone will beep.

The user can enable/disable the call waiting function in the phone interface and the web interface.

Phone interface: Press [Phone Settings] >> [Call] >> [Call], enable/disable call waiting and call waiting tone.

Picture 47 - Local conference (1)

2) If the device has a call all the way, press the conference key in the call interface, enter the number to join the meeting and press the call; After the opposite end is answered, press the conference button again to set up the local tripartite conference:

Picture 48 - Local conference (2)

Note:During the conference, press the split button to split the conference and press the end button to end the call.

8.15.2 Network Conference

Users need server support for network conference.

Log in the web page, enter [Line] >> [SIP] >> [Basic settings], set the conference mode as server mode (default is local mode), set the server conference room number (please consult your system administrator), as shown in the figure:

	SIP SIP Ho	otspot Dial Plan Action	n Plan Basic Settings

Picture 49 - Network conference

Method to join a network conference:

- Call the numbers of network conference and when they enter the password then will enter the conference room.
- The two phones have established common calls. Press the conference button to invite new members to the conference. Follow the voice prompt to operate.

Note: the upper limit of the number of participants in the network conference varies according to the server.

8.16 Call Park

Call Park requires server support. Consult your system administrator for support. When you are on the call, it is not convenient to answer the phone at this time, you can press the configured park button to hold the call; After the Call Park is successful, you can resume the call by pressing the configured park button on other devices. Set the call park button:

- Phone interface: In standby mode, long press an editable key to enter the function key setting interface. key function key type as memory and subtypes to call park, reside values for the server calls park number, set up corresponding SIP lines.
- WEB interface: log in the phone page, enter the [Function Key] >> [Function Key] page, select a DSSkey, set the function key type as memory key, the subtype as call park, and the value as the call park number of the server, and set the corresponding SIP line.

8.17 Pick Up

Picking-up requires server support. Consult your system administrator for support. You can use the Pick Up function to answer incoming calls from other users. The phone can pick up incoming calls by configuring DSSkey for BLF and setting the Pick Up code. In standby mode, long press an editable key to enter the interface of function key setting. Set the function key type as memory key and the subtype as BLF/NEW CALL, and set the corresponding SIP line. Finally fill in the grab number.

• Set the line, function key type as memory key, subtype as BLF/NEW CALL, set

subscription number, and pick up code

- Other phones call the subscription number, and the opposite end is in the incoming ring.
- Press the DSS key to pick up the phone.
- The caller picks up the call and speaks to it.

WEB interface: Log in the phone webpage, enter the [Function Key] >> [Function Key] page, select a DSSkey, set the memory key type as memory key, the subtype as BLF/NEW CALL, and set the corresponding SIP line and pick up codes.

BLF/DTMF	Pressing the BLF key while	When the BLF key is pressed while talking to
	standby to dial the subscriber	another user, the phone automatically sends
	number.	the DTMF corresponding to the BLF key
		number.

9.1.2 Use the BLF Function

The BLF, also known as a "busy light field," notifies the user of the status of the

subscribed object and is used by the server to pick up the call. BLF helps you monitor the other person's status (idle, ringing, talking, off). BLF function:

• Monitor the status of subscribed phones.

- Call the subscribed number.
- Transfer calls to the subscribed number.
- Pick up incoming calls from subscribed number.

1) Monitors the status of subscribed phones.

Configuration BLF function keys, when the subscription of the number of the state (idle, ringing, talking) is changed, the function key state of LED lights will have corresponding change, see <u>Appendix II 6.2</u> to get to know each other under different status leds.

2) Call the subscribed number.

When the phone is in standby mode, press the configured BLF key to call out the subscribed number.

3) Transfer calls/calls to the subscribed number.

Refer to <u>Table 9.1.1-blf function key</u> subtype parameter list, the BLF key can be used for blind rotation, attention-rotation and semi-attention-rotation of the current call, and also can invite the subscribed number to join the call and send DTMF, etc.

4) Pickup incoming calls from subscribed phones.

When configuring BLF function key, configure the pickup number.

When the subscription number telephone rings, refer to <u>Appendix II 6.2</u> will flash a red light. At this point, press the BLF button to answer the incoming call from the subscribed number.

9.2 BLF List

BLF List Key is to put the number to be subscribed into a group on the server side, and the phone uses the URL of this group to make unified subscription. The specific information, number, name and status of each number can be resolved based on notify sent from the server. The unoccupied Memory Key is then set to the BLF List Key. If the state of the subscription object changes later, the corresponding led light state will be changed.

Configure BLF List function: log in the phone page, enter the [Line] >> [SIP] >> [Advanced settings] page, open the BLF List, and configure the BLF List number.

9.3 Record

The device supports recording during a call.

9.3.1 Local Record

When using local recording, it is necessary to start recording on the phone page [**Application**] >> [**Manage recording**], select the local type and set the voice coding. The webpage is as follows:

	Doorphone Settings Mana	age Recording		
System				
Network	Record Setting Enable Record:			
Line	Record Type: Voice Codec:	Local V PCMU V		
Phone settings		Apply		
Phonebook	Recording List			
Call logs	In	idex	File Name	File Size
Function Key				
Application				

Picture 63 - WEB local recording

Local recording steps:

Open the recording on the web page, and set the recording type as local recording.

Set DSSkey type as key event and type as record in the phone/web interface.

Set up one line call and press the recording key (set DSSkey).

End the recording. End the call.

View local recording:

- Enter [Application] >> [Sound Recorder]
- Enter view the recording file.
- Or enter the webpage [**Application**] under the [**Manage recording**] to view the recording file.

Listen to the record:

- Enter [Application] >> [Sound Recorder].
- Enter view the recording file.
- Select the recording file that you want to listen to, and click listen to the recording.

9.3.2 Server Record

When using the network server to record, it is necessary to open the recording in the phone web page [**Application**] >> [**Manage recording**]. The type is selected as network, and the address and port of the recording server are filled in and the voice coding is selected. The web is as follows:

	Doorphone Settings Mana	age Recording		
System				
etwork	Record Setting Enable Record:	×.		
ine	Record Type: Voice Codec:	Network PCMU		
hone settings	Server Address:	0.0.0.0 Apply	Server Port:	10000
nonebook	Recording List	(debe)		
ill logs	In	idex	File Name	File Size
Inction Key				Delete
Application				

Picture 64 - Web server recording

Note: to be used with Fanvil recording software.

Please refer to the documentation for specific usage: **Call Recording Configuration** and **Use Description**

http://www.fanvil.com.cn/Uploads/Temp/download/20180928/5badccd249853.pdf

9.3.3 SIP INFO Record

The phone is registered with a server that supports SIP INFO recording. After registering the account, check the recording module of [**Application**] >> [**Manage recording**] to open the Record Settings, and the recording type is SIP INFO.

	Doorphone Settings Mana	age Recording		
> System				
Network	Record Setting Enable Record:

9.4 Agent

Agent (Agent function) of the phone can be realized: when multiple people use a device for Agent services at different times, he or she can quickly register his or her SIP account on the same server. The Agent functions of the phone can be divided into Normal and Hotel Guest. The Hotel Guest mode requires server support.

Normal Mode:

Configure agent function: set a DSS key as agent, press the function key or enter the [**Settings**] >> [**Call**] >> [**More**] >> [**Agent**] to enter the agent page. The SIP server needs to be configured before the account can be configured.

9.6 MCAST

This feature allows user to make some kind of broadcast call to people who are in multicast group. User can configure a multicast DSS Key on the phone, which allows user to send a Real Time Transport Protocol (RTP) stream to the pre-configured multicast address without involving SIP signaling. You can also configure the phone to receive an RTP stream from pre-configured multicast listening address without involving SIP signaling. You can specify up to 10 multicast listening addresses.

	Features Media Setting	s MCAST Actio	on Time/Date	Tone	Advanced
› System					
› Network	MCAST Listening Priority:	1			
> Line	Enable Page Priority: Enable Prio Chan:				
> Phone settings	Enable Emer Chan: Index/Priority	Name	Host:port		Channel

› Call logs	3 4				0 V 0 V
Function Key	5				0 v 0 v
> Application	7 8				0 v
> Security	9 10	Apply			0 v

Table 9 - MCAST Parameters on Web

Parameters	Description
Normal Call Priority	Define the priority of the active call, 1 is the
	highest priority, 10 is the lowest.
Enable Page Priority	The voice call in progress shall take precedence
	over all incoming paging calls.
Name	Listened multicast server name
Host: port	Listened multicast server's multicast IP address

and port.

Multicast:

- Go to web page of [Function Key] >> [Function Key] , select the type to multicast, set the multicast address, and select the codec.
- Click Apply.
- Set up the name, host and port of the receiving multicast on the web page of [Phone Settings] >> [MCAST].
- Press the DSSKEY of Multicast Key which you set.
- Receiver will receive multicast call and play multicast automatically.

9.7 SCA (Shared Call Appearance)

Users need the support of server end to use SCA function. You can refer to http://www.fanvil.com/Uploads/Temp/download/20180920/5ba38181e4e4b.pdf

- 1) Configure on Phone
- When registering with the BroadSoft server, a Fanvil Phone can register the account created previously on multiple terminals.

Picture 73 - Enable SCA

After an account is configured and successfully registered, you can configure DSS Keys as the lines which can enable Shared Call Appearanceas on the Function Key page to facilitate viewing the call status of the group. Each line key represents a call appearance. Understand the call status by referring to <u>Appendix II 6.2</u>.

To facilitate private hold, configure keys whose DSS Key is Private Hold on the Function Key page. Pay attention that the public hold key is the softkey [Hold] key

during a call.

Picture 74 - Set Private Hold Function Key

- After each phone registered with the BroadSoft server is configured as above, the SCA function can be used.
- 2) LED Status

To facilitate viewing the call status of a group, configure lines whose DSS Key is SCA. The following table describes the LEDs of lines in different states.

State & Direction	Local Light	Remote Light
Idle	Off	Off
Seized	Steady green	Steady red
Progressing (outgoing call)	Steady green	Steady red
Alerting (incoming call)	Fast blinking green	Fast blinking green
Active	Steady green	Steady red
Public Held (hold)	Slow blinking green	Slow blinking red
Held-private (private hold)	Slow blinking yellow	Steady red
Bridge-active (Barge-in)	Steady green	Steady red
Bridge-held	Steady green	Steady red

Table 10 - LED Status of SCA

3) Shared Call Appearance(SCA)

The following lists a couple of instances to facilitate understanding.

In the following scenarios, the manager and secretary register the same SCA account and the account is configured based on the preceding steps.

Scenario 1: When this account receives an incoming call, the phone sets of both the

manager and the secretary will receive the call and ring. If the manager is busy, the manager can reject the call and the manager's phone set stops ringing but the secretary's phone set keeps ringing until the secretary rejects/answers the call or the call times out.

Scenario 2: When this account receives an incoming call, if the secretary answers the call first and the manager is required to answer the call, the secretary can press the Public Hold key to hold this call and notify the manager. The manager can press the line key corresponding to the SCA to answer the call.

Scenario 3: The manager is in an important call with a customer and needs to leave for a while. If the manager does not want others to retrieve this call, the manager can press the Private Hold key.

Scenario 4: The manager is in a call with a customer and requires the secretary to join the call to make records. The secretary can press the corresponding SCA line key to barge in this call.

9.8 Message

9.8.1 MWI (Message Waiting Indicator)

If the service of the lines supports voice message feature, when the user is not available to answer the call, the caller can leave a voice message on the server to the user. User will receive voice message notification from the server and device will prompt a voice message waiting icon on the standby screen.

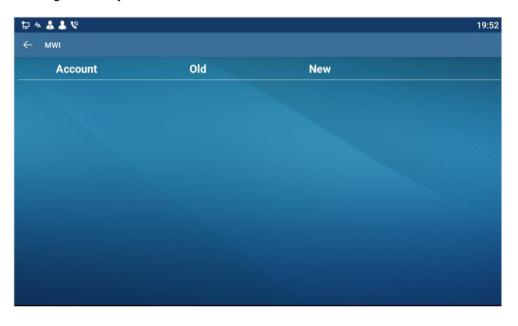

Picture 75 - New Voice Message Notification

To listen to a voice message, the user must first configure the voicemail number. After the voicemail number is configured, the user can retrieve the voicemail of the default line.

When the phone is in the default standby state,

- The voicemail icon displays the number of unread voicemail messages.
- Click the icon to view the total number of voicemail messages, or listen to the messages directly in the voicemail interface

Picture 76 - Voice message interface

Picture 77 - Configure voicemail number

9.9 SIP Hotspot

SIP hotspot is a simple but practical function. With simple configurations, the SIP hotspot function can implement group ringing. SIP accounts can be expanded.

Set a phone as a SIP hotspot and other phones (B and C) as SIP hotspot clients. When somebody calls phone A, phone A, B, and C all ring. When any phone answers the call, other phones stop ringing. The call can be answered by only one phone. When B or C initiates a call, the SIP number registered by phone A is the calling number. To set a SIP hotspot, register at least one SIP account.

Picture 80 - SIP hotspot client configuration

As the hotspot server, the default extension number is 0. When the phone is used as the client, the extension number is increased from 1, you can view the extension number through the [**SIP Hotspot**] page.

Call extension number:

- The hotspot server and the client can dial each other through the extension number.
- For example, extension 1 dials extension 0.

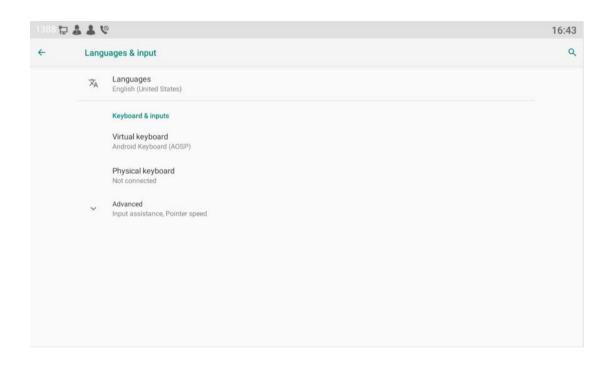

10 Phone Settings

10.1 Basic Settings

10.1.1 Language

The user can set the phone language through the phone interface and web interface.

Phone interface : After resetting the factory settings, the user needs to set the language; when setting the language during standby, go to [Settings]
 [Language&input] Settings, as shown in the figure.

Picture 81 - Phone language setting

• Web interface: Log in to the phone webpage and set the language in the drop-down box at the top right corner of the page, as shown in the figure:

Picture 85 - Set screen parameters on phone

10.1.3.1 Screen Saver

• When the phone is in default standby state, press the function menu [**settings**]>> [**Display**] to enable the screen protection, as shown in the figure below:

Picture 86 - Phone screen saver

10.1.4 **Ring**

When the device is in the default standby mode,

- Enter[Settings] >> [Sound] >> [Tone] set promote tone
- The prompt tone contains Settings such as caller ring, notification ring, touch prompt tone, etc.

10.1.5 Voice Volume

When the device is in the default standby mode,

- Enter [Settings] >> [Sound] item till you find [Volume] item.
- The prompt tone contains Settings such as caller ring, notification ring, touch prompt tone, etc.

10.1.6 **Reboot**

When the device is in the default standby mode,

- Enter [Settings] >> [Reboot] item.
- Click [Reboot] to indicate whether to restart the phone.
- Press [**OK**] to restart the phone or press [**Cancel**] to exit the prompt box to return to the configuration interface.

10.2 Phone book

10.2.1 Local contact

Users can save contact information in the phone book and dial the contact's phone number directly in the phone book. The user can open the phone book by pressing the function menu button "contacts" in the default main interface.

By default, the phone book is empty, and users can add manually or add contacts to the phone book from the call log (or cloud phone book).

NOTICE! The device can save up to total 2000 contact records.

Picture 87 - Local Phone book

When there are contact records in the phone book, the contact records will be arranged in the alphabet order. User may browse the contacts with Swipe screen. The user can directly click the contact to call, or click the exclamation mark icon on the right to view the contact details.

10.2.1.1 Add / Edit / Delete Contact

Add a contact, click to enter the contact interface, select the first icon (contact icon, selected by default) and add the following contact information.

- Contact Name
- Tel. Number
- Mobile Number
- Other Number
- Line
- Ring Tone
- Contact Group
- Photo

Picture 88 - Add New Contact

User can edit a contact by pressing [Edit] button.

Delete contact: The user can enter the delete contact list by pressing the [Delete] icon, and click the select all button to select all the contacts that you want to delete, or the check box after the user selects a contact; then press the delete icon again You will be prompted to delete the selected contact.

10.2.1.2 Add / Edit / Delete Group

By default, the group list is empty. Users can create their own group, edit group names, add or remove contacts from the group, and delete groups.

- Add group. In the contact list interface, press the "group" icon to switch to the group list. Click add button again to enter the page of creating groups.
- Delete groups, under groups list.
- To edit the group, press edit.

Picture 89 - Group List

10.2.2 Black list

The device supports blacklist, such as the number added to the blacklist, the number of calls directly refused to the end, the end of the phone shows no incoming calls. (Blacklisted Numbers can be called out normally)

- There are multiple ways to add a number to Blacklist on the device. It can be added directly on [Contacts] icon >> [Group] icon>> [Blacklist].
- Select any number in the phone book (both local and network) for configuration addition.
- Select any number in the call log for configuration addition.

Picture 91 - Web Blacklist

10.2.3 Cloud Phone Book

10.2.3.1 Configure Cloud Phone book

Cloud phonebook allows user to configure the device by downloading a phonebook from a cloud server. This is convenient for office users to use the phonebook from a single source and save the effort to create and maintain the contact list individually. It is also a useful tool to synchronize his/her phonebook from a personal mobile phone to the device with Fanvil Cloud Phonebook Service and App which is to be provided publicly soon.

NOTICE! The cloud phonebook is ONLY temporarily downloaded to the device each time when it is opened on the device to ensure the user get the latest phonebook. However, the downloading may take a couple seconds depending on the network condition. Therefore, it is highly recommended for the users to save important contacts from cloud to local phonebook for saving download time.

Open cloud phonebook list, press[Contacts] icon>> [Network PhoneBook] in phonebook screen.

TIPS! The first configuration on cloud phone should be completed on Web page by selecting [PhoneBook] >> [Cloud Contacts]. The setting of addition/deletion on device could be done after the first setting on Web page.

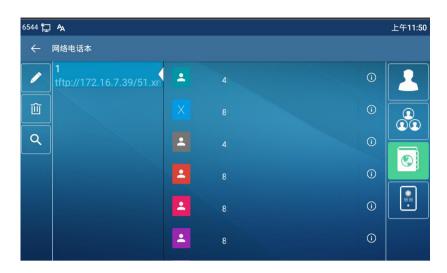

Picture 92 - Cloud phone book list

10.2.3.2 Downloading Cloud Phone book

In cloud phone book screen, user can open a cloud phone book by pressing the network phonebook. The device will start downloading the phone book. The user will be prompted with a warning message if the download fails,

Once the cloud phone book is downloaded completely, the user can browse the contact list and dial the contact number same as in local phonebook.

Picture 93 - Browsing Contacts in Cloud Phone book

10.3 Call log

The device can store up to 2000 call log records and user can open the call logs to check all incoming, outgoing, and missed call records by pressing [Missed call] icon.

In the call logs screen, user may browse the call logs with up/down swipe.

Each call log record is presented with 'call type' and 'call party number / name'. User can check further call log detail by pressing [Info] icon and dial the number with pressing the call log, or add the call log number to phonebook with pressing [Info] Icon >> [Add to Contact].

User can delete a call log by pressing [Delete] button.

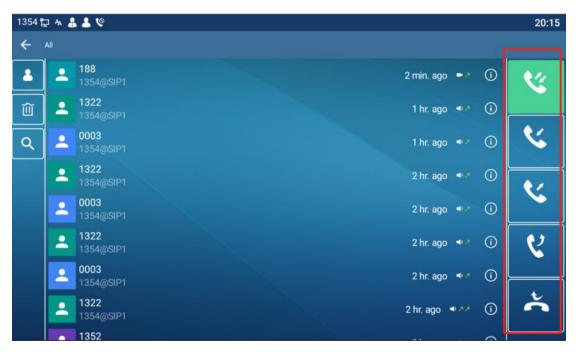

Picture 94 - Call Log

Users can also filter the call records of specific call types to narrow down the scope of search records, and select a call record type by press the type icon.

Picture 95 - Filter call record types

10.4 Function Key

Function key settings:

There are 5 shortcut keys displayed on the screen in standby mode, each of which can be customized by DSSkey.

Users can add/delete DSSkey pages through the webpage, and use the page switch key to switch DSSkey pages. In addition, users can also modify the settings of the corresponding keys by long pressing each shortcut key.

Moreover, user also can add the user-defined title for the DSS Keys, which is configured as Memory Key / Line / URL / MCAST Paging / Prefix.

NOTICE! User-defined title is up to 10 characters.

More detailed information *refers to <u>12.23 Function Key</u>* and <u>6.2 Appendix III –LED</u> <u>Definition</u>.

10.5 Wi-Fi

The device supports wireless Internet access and has built-in Wi-Fi without external devices.

When the device is in the default standby mode,

- Pull down the menu, long press the [WLAN] icon,Enter [Wi-Fi] item.
- Enable the Wi-Fi to search the current wireless network automatically.
- Select to the available network, enter the user name and password to connect successfully.

10.6 Headset

10.6.1 Bluetooth Headset

The device supports Bluetooth applications and can be compatible with Bluetooth headsets with CSR 4.0 chips. There is no need to use a USB Bluetooth adapter. The phone has a built-in Bluetooth and Bluetooth antenna.

The phone is in the default standby state,

Long press the function menu button [Bluetooth], click the switch to turn on Bluetooth,

and it will automatically search for available devices.

Select the device to pair and connect.

	(i)	Turn on Bluetooth to connect to other devices.	

Picture 98 - Bluetooth Settings Screen

The use of Bluetooth headset can be divided into three types: call answering; Hang up; Bluetooth redial.

• call answering

When the Bluetooth headset is connected to the phone, the incoming call can be answered by pressing the Bluetooth answer button.

• Hang up

1) When talking with Bluetooth headset, you can hang up the phone by pressing the button on Bluetooth headset.

2) When there is an incoming call, double-click the answer button to reject the call.

3) When the caller is in the ringing state, press the answer button of the headset to cancel the call.

Bluetooth redial

When the Bluetooth headset is connected, double-click the answer button to redial the number dialed last time.

NOTICE! some models do not support double - click redial function. Whether this function is supported or not, you can check the instruction of the headset, or connect the Bluetooth headset to the phone, and double-click the answer button to see whether it will redial.

When using Static IP mode, user must configure the IP address manually.

- IP Address: Phone IP address.
- Subnet Mask: sub mask of your LAN.
- IP Gateway: The gateway IP address. Phone could access the other network via it.
- Primary DNS: Primary DNS address. The default is 8.8.8.8, Google DNS server address.
- Secondary DNS: Secondary DNS. When primary DNS is not available, it will work.

10.7.2.2 QoS & VLAN

Access [Settings]>>[Advanced]>> [Network]>> [Advance]

LLDP

Link Layer Discovery Protocol. LLDP is a vendor independent link layer protocol used by network devices for advertising their identity, capabilities to neighbors on a LAN segment.

Phone could use LLDP to find the VLAN switch or other VLAN devices and use LLDP to learn feature to apply the VLAN ID from VLAN switch to phone its self.

■ CDP

Cisco Discovery Protocol. CDP is a not-for-profit charity that runs the global disclosure system for investors, companies, cities, states and regions to manage their environmental impacts. According to the CDP, Cisco devices could share the OS version,

IP address, hardware version and so on.

Table 13 - QoS & VLAN

Parameters	Description		
LLDP setting			
Report	Enable LLDP		
Interval	LLDP requests interval time		
Learning	apply the learned VLAN ID to the phone		
	configuration		
QoS			
QoS Mode	configure SIP DSCP and audio DSCP		
WAN VLAN			
WAN VLAN	WAN port VLAN configuration		
LAN VLAN			
LAN VLAN	LAN port VLAN configuration		
CDP			
CDP	CDP enable/disable , CDP interval time		

10.7.2.3 Web Server Type

Access [**Settings**]>>[**Advanced**] >>[**Network**]>> [**Service Port**] to configure the Web Server mode.

Configure the Web Server mode to be HTTP or HTTPS and will be activated after the reboot. Then user could use http/https protocol to access pone web page.

۵.	1 1 %			17:49
←	Service	Port		
		Web server type	НТТР	
		HTTP port (80,1024~65535)	80	
		Note:Please reboot the syste	em to take effect if you modify the HTTP(S) port.

Picture 106 - Phone auto provision settings

Fanvil devices support SIP PnP, DHCP options, Static provision, TR069. If all of the 4 methods are enabled, the priority from high to low as below:

PNP>DHCP>TR069> Static Provisioning

Transferring protocol: FTP、 TFTP、 HTTP、 HTTPS

Details refer to Fanvil Auto Provision in

http://www.fanvil.com/Uploads/Temp/download/20180920/5ba3816f8d5f0.pdf<u>https://www.fanvil.com.cn/Support/download/cid/14.html</u>

Table 14 - Auto Provision

Parameters	Description			
Basic settings				
CPE Serial Number	Display the device SN			
Authentication Name	The user name of provision server			
Authentication Password	The password of provision server			
Configuration File	If the device configuration file is encrypted , user should add			
Encryption Key	the encryption key here			
General Configuration File	If the common configuration file is encrypted, user should add			
Encryption Key	the encryption key here			
Download Fail Check	If there download is failed, phone will retry with the configured			
Times	times.			
Update Contact Interval	Phone will update the phonebook with the configured interval			
	time. If it is 0, the feature is disabled.			
Save Auto Provision	Save the HTTP/HTTPS/FTP user name and password. If the			
Information	provision URL is kept, the information will be kept.			
Download Common	Whether phone will download the common configuration file.			
Config enabled				
Enable Server Digest	When the feature is enable, if the configuration of server is			
	changed, phone will download and update.			
DHCP Option				
	Confiugre DHCP option, DHCP option supports DHCP custom			
Option Value	option DHCP option 66 DHCP option 43, 3 methods to get			
	the provision URL. The default is Option 66.			
Custom Option Value	Custom Option value is allowed from 128 to 254. The option			
	value must be same as server define.			
Enable DHCP Option 120	Use Option120 to get the SIP server address from DHCP			
	server.			
SIP Plug and Play (PnP)				
	Whether enable PnP or not. If PnP is enable, phone will send			
Enable SIP PnP	a SIP SUBSCRIBE message with broadcast method. Any			
	server can support the feature will respond and send a Notify			
	with URL to phone. Phone could get the configuration file with 102			

	the URL.
Server Address	Broadcast address. As default, it is 224.0.0.0.
Server Port	PnP port
Transport Protocol	PnP protocol, TCP or UDP.
Update Interval	PnP message interval.
Static Provisioning Serve	
Server Address	Provisioning server address. Support both IP address and domain address.
	The configuration file name. If it is empty, phone will request
	the common file and device file which is named as its MAC
Configuration File Name	address.
	The file name could be a common name, \$mac.cfg, \$input.cfg.
	The file format supports CFG/TXT/XML.
	Transferring protocol type , supports FTP、TFTP、HTTP and
Protocol Type	HTTPS
Lindete Interval	Configuration file update interval time. As default it is 1, means
Update Interval	phone will check the update every 1 hour.
	Provision Mode.
Lindata Mada	1. Disabled.
Update Mode	2. Update after reboot.
	3. Update after interval.
TR069	
Enable TR069	Enable TR069 after selection
ACS Server Type	There are 2 options Serve type, common and CTC.
ACS Server URL	ACS server address
ACS User	ACS server username (up to is 59 character)
ACS Password	ACS server password (up to is 59 character)
Enable TR069 Warning	If TR069 is enabled, there will be a prompt tone when
Tone	connecting.
TLS Version	TLS version (TLS 1.0, TLS 1.1, TLS 1.2)
INFORM Sending Period	INFORM signal interval time. It ranges from 1s to 999s
STUN Server Address	Configure STUN server address
STUN Enable	To enable STUN server for TR069

10.7.6 Factory Reset

The phone is in default standby mode.

- Press [Settings] to find [Advanced]>> [Maintain]>> [Phone Reset].
- Press [**reset**] to clear all. When you select clear configuration file and clear all, the phone will restart automatically after clearing.

Picture 110 - Reset to default

11 Web Configurations

11.1 Web Page Authentication

The user can log into the web page of the phone to manage the user's phone information and operate the phone. Users must provide the correct user name and password to log in.

11.2 System >> Information

User can get the system information of the device in this page including,

- Model
- Hardware Version
- Software Version
- Uptime

And summarization of network status,

- Network Mode
- MAC Address
- IP
- Subnet Mask
- Default Gateway

Besides, summarization of SIP account status,

- SIP User
- SIP account status (Registered / Unapplied / Trying / Timeout)

11.3 System >> Account

On this page the user can change the password for the login page.

Users with administrator rights can also add or delete users, manage users, and set permissions and passwords for new users.

11.4 System >> Configurations

On this page, users with administrator privileges can view, export, or import the phone configuration, or restore the phone to factory Settings.

■ Clear Configurations

Select the module in the configuration file to clear. SIP: account configuration. AUTOPROVISION: automatically upgrades the configuration TR069:TR069 related configuration MMI: MMI module, including authentication user information, web access protocol, etc. DSS Key: DSS Key configuration

Clear Tables

Select the local data table to be cleared, all selected by default.

Reset Phone

The phone data will be cleared, including configuration and database tables.

11.5 System >> Upgrade

Upgrade the phone software version, customized ringtone, can also be upgraded to delete the file. Ring tone support ".wav" format.

11.6 System >> Auto Provision

The Auto Provision settings help IT manager or service provider to easily deploy and manage the devices in mass volume. For the detail of Auto Provision, please refer to this link Auto Provision Description.

http://www.fanvil.com/Uploads/Temp/download/20180920/5ba3816f8d5f0.pdf

11.7 System >> Tools

Tools provided in this page help users to identify issues at trouble shooting. Please refer to <u>13 Trouble Shooting</u> for more detail.

11.8 System >> Reboot Phone

This page can restart the phone.

	Information	Account	Configurations	Upgrade	Auto Provision	Tools	Reboot Phone	
> System								NOTE
> Network	Reboot Phone		Click [Re	boot] button to rest	tart the phone!			Descrip Reboot p
› Line				Reboot				

12 Network >> Basic

This page allows users to configure network connection types and parameters.

12.1 Network >> Service Port

This page provides settings for Web page login protocol, protocol port settings and RTP port.

	Basic Service Port	VPN	Advanced	
› System				
> Network	Service Port Settings			
	Web Server Type:	HTTP 🔻		0
› Line	Web Logon Timeout:	15	(10~30)Minute	0
	web auto login:			
-	HTTP Port:	80		0
Phone settings	HTTPS Port:	443		0
> Phonebook	RTP Port Range Start:	10000	(1025~65530)	0
	RTP Port Quantity :	200	(10~1000)	0
> Call logs			Apply	

Picture 111 - Service Port Settings

Parameter	Description		
Web Server Type	Reboot to take effect after settings. Optionally,		
	the web page login is HTTP/HTTPS.		
Web Logon Timeout	Default as 15 minutes, the timeout will		
	automatically exit the login page, need to login		
	again.		
Web auto login	After the timeout does not need to enter a user		
	name password, will automatically login to the		
	web page.		
HTTP Port	The default is 80. If you want system security,		
	you can set ports other than 80.		
	Such as :8080, webpage login: HTTP://ip:8080		
HTTPS Port	The default is 443, the same as the HTTP port.		
RTP Port Range Start	The value range is 1025 to 65535. The value of		
	RTP port starts from the initial value set. For		
	each call, the value of voice and video port is		
	added 2.		
RTP Port Quantity	Number of calls.		

Table 17 - Service port

12.2 Network >> Advanced

Advanced network Settings are typically configured by the IT administrator to improve the quality of the phone service. For configuration, query the <u>10.7 advanced</u> Settings.

12.3 Line >> SIP

Configure the Line service configuration on this page.

Parameters	Description		
Register Settings			
Line Status	Display the current line status at page loading.		
	To get the up to date line status, user has to		
	refresh the page manually.		
Activate	Whether the service of the line is activated		
Username	Enter the username of the service account.		
Authentication User	Enter the authentication user of the service		
	account		
Display Name	Enter the display name to be sent in a call		
	request.		
Authentication Password	Enter the authentication password of the service		
	account		
Realm	Enter the SIP domain if requested by the service		
	provider		
Server Name	Input server name.		
SIP Server 1			
Server Address	Enter the IP or FQDN address of the SIP server		
Server Port	Enter the SIP server port, default is 5060		
Transport Protocol	Set up the SIP transport line using TCP or UDP		
	or TLS.		
Registration Expiration	Set SIP expiration date.		
SIP Server 2			
Server Address	Enter the IP or FQDN address of the SIP server		
Server Port	Enter the SIP server port, default is 5060		

Table 18 - Line configuration on the web page

Transport Protocol	Set up the SIP transport line using TCP or UDP or TLS.			
Registration Expiration	Set SIP expiration date.			
SIP Proxy Server Address	Enter the IP or FQDN address of the SIP proxy server.			
Proxy Server Port	Enter the SIP proxy server port, default is 5060.			
Proxy User	Enter the SIP proxy user.			
Proxy Password	Enter the SIP proxy password.			
Backup Proxy Server Address	Enter the IP or FQDN address of the backup proxy server.			
Backup Proxy Server Port	Enter the backup proxy server port, default is 5060.			
Basic Settings				
Enable Auto Answering	Enable auto-answering, the incoming calls will			
-	be answered automatically after the delay time			
Auto Answering Delay	Set the delay for incoming call before the system			
	automatically answered it			
Call Forward Unconditional	Enable unconditional call forward, all incoming calls will be forwarded to the number specified in the next field			
Call Forward Number for Unconditional	Set the number of unconditional call forward			
Call Forward on Busy	Enable call forward on busy, when the phone is busy, any incoming call will be forwarded to the number specified in the next field.			
Call Forward Number for Busy	Set the number of call forward on busy .			
Call Forward on No Answer	Enable call forward on no answer, when an incoming call is not answered within the configured delay time, the call will be forwarded to the number specified in the next field.			
Call Forward Number for No Answer	Set the number of call forward on no answer.			
Call Forward Delay for No Answer	Set the delay time of not answered call before being forwarded.			
Transfer Timeout	Set the timeout of call transfer process.			
Conference Type	Set the type of call conference, Local=set up call conference by the device itself, maximum supports two remote parties, Server=set up call conference by dialing to a conference room on the server			

Server Conference Number	Set the conference room number when conference type is set to be Server
Subscribe For Voice Message	Enable the device to subscribe a voice message
Subscribe For Voice Message	waiting notification, if enabled, the device will
	receive notification from the server if there is
	voice message waiting on the server
Voice Message Number	Set the number for retrieving voice message
Voice Message Subscribe Period	Set the interval of voice message notification
	subscription
Enable Hotline	Enable hotline configuration, the device will dial
	to the specific number immediately at audio
	channel opened by off-hook handset or turn on
	hands-free speaker or headphone
Hotline Delay	Set the delay for hotline before the system
	automatically dialed it
Hotline Number	Set the hotline dialing number
Dial Without Registered	Set call out by proxy without registration
Enable Missed Call Log	If enabled, the phone will save missed calls into
	the call history record.
DTMF Type	Set the DTMF type to be used for the line
DTMF SIP INFO Mode	Set the SIP INFO mode to send '*' and '#' or '10'
	and '11'
Enable DND	Enable Do-not-disturb, any incoming call to this
	line will be rejected automatically
Subscribe For Voice Message	Enable the device to subscribe a voice message
	waiting notification, if enabled, the device will
	receive notification from the server if there is
	voice message waiting on the server
Use VPN	Set the line to use VPN restrict route
Use STUN	Set the line to use STUN for NAT traversal
Enable Failback	Whether to switch to the primary server when it
	is available.
Failback Interval	A Register message is used to periodically
	detect the time interval for the availability of the
	main Proxy.
	main i roxy.
Signal Failback	-
Signal Failback	Multiple proxy cases, whether to allow the invite/register request to also execute failback.

	considers proxy unavailable under multiple			
proxy scenarios.				
Codecs Settings	Set the priority and availability of the codecs by			
	adding or remove them from the list.			
Video Codecs	Select video code to preview video.			
Advanced Settings				
Use Feature Code	When this setting is enabled, the features in this			
	section will not be handled by the device itself			
	but by the server instead. In order to control the			
	enabling of the features, the device will send			
	feature code to the server by dialing the number			
	specified in each feature code field.			
Enable DND	Set the feature code to dial to the server			
Disable DND	Set the feature code to dial to the server			
Enable Call Forward Unconditional	Set the feature code to dial to the server			
Disable Call Forward Unconditional	Set the feature code to dial to the server			
Enable Call Forward on Busy Set the feature code to dial to the server				
Disable Call Forward on Busy Set the feature code to dial to the set				
Enable Call Forward on No Answer	Set the feature code to dial to the server			
Disable Call Forward on No Answer	swer Set the feature code to dial to the server			
Enable Blocking Anonymous Call	Set the feature code to dial to the server			
Disable Blocking Anonymous Call	Set the feature code to dial to the server			
Call Waiting On Code	Set the feature code to dial to the server			
Call Waiting Off Code	Set the feature code to dial to the server			
Send Anonymous On Code	Set the feature code to dial to the server			
Send Anonymous Off Code	Set the feature code to dial to the server			
SIP Encryption	Enable SIP encryption such that SIP			
	transmission will be encrypted			
RTP Encryption	Enable RTP encryption such that RTP			
	transmission will be encrypted			
Enable Session Timer	Set the line to enable call ending by session			
	timer refreshment. The call session will be			
	ended if there is not new session timer event			
	update received after the timeout period			
Session Timeout	Set the session timer timeout period			
Enable BLF List	Enable/Disable BLF List			
BLF List Number	BLF List allows one BLF key to monitor the			
	status of a group. Multiple BLF lists are			

	supported.			
Response Single Codec	If setting enabled, the device will use single			
	codec in response to an incoming call request			
BLF Server	The registered server will receive the			
	subscription package from ordinary application			
	of BLF phone.			
	Please enter the BLF server, if the sever does			
	not support subscription package, the registered			
	server and subscription server will be separated.			
Keep Alive Type	Set the line to use dummy UDP or SIP OPTION			
	packet to keep NAT pinhole opened			
Keep Alive Interval	Set the keep alive packet transmitting interval			
Keep Authentication	Keep the authentication parameters from			
	previous authentication			
Blocking Anonymous Call	Reject any incoming call without presenting			
	caller ID			
User Agent	Set the user agent, the default is Model with			
	Software Version.			
Specific Server Type	Set the line to collaborate with specific server			
	type			
SIP Version	Set the SIP version			
Anonymous Call Standard	Set the standard to be used for anonymous			
Local Port	Set the local port			
Ring Type	Set the ring tone type for the line			
Enable user=phone	Sets user=phone in SIP messages.			
Use Tel Call	Set use tel call			
Auto TCP	Using TCP protocol to guarantee usability of			
	transport for SIP messages above 1500 bytes			
Enable Rport	Set the line to add rport in SIP headers			
Enable PRACK	Set the line to support PRACK SIP message			
DNS Mode	Select DNS mode, A, SRV, NAPTR			
Enable Long Contact	Allow more parameters in contact field per RFC			
	3840			
Enable Strict Proxy	Enables the use of strict routing. When the			
	phone receives packets from the server, it will			
	use the source IP address, not the address in			
	via field.			
Convert URI	Convert not digit and alphabet characters to			

	%hh hex code			
Use Quote in Display Name	Whether to add quote in display name, i.e.			
	"Fanvil" vs Fanvil			
Enable GRUU	Support Globally Routable User-Agent URI			
	(GRUU)			
Sync Clock Time	Time Sync with server			
Enable Inactive Hold	With the post-call hold capture package			
	enabled, you can see that in the INVITE			
	package, SDP is inactive.			
Caller ID Header	Set the Caller ID Header			
Use 182 Response for Call waiting	Set the device to use 182 response code at call			
	waiting response			
Enable Feature Sync	Feature Sync with server			
Enable SCA	Enable/Disable SCA (Shared Call Appearance)			
CallPark Number	Set the CallPark number.			
Server Expire	Set the timeout to use the server.			
TLS Version	Choose TLS Version.			
uaCSTA Number	Set uaCSTA Number.			
Enable Click To Talk	With the use of special server, click to cal			
	directly after enabling.			
Enable Chgport	Whether port updates are enabled.			
VQ Name	Open the VQ name for VQ RTCP-XR.			
VQ Server	Open VQ server address for VQ RTCP-XR.			
VQ Port	Open VQ port for VQ RTCP-XR.			
VQ HTTP/HTTPS Server	Enable VQ server selection for VQ RTCP-XR.			
Flash mode	Chose Flash mode, normal or SIP info.			
Flash Info Content-Type	Set the SIP info content type.			
Flash Info Content-Body	Set the SIP info content body.			
PickUp Number	Set the scramble number when the Pickup is			
	enabled.			
JoinCall Number	Set JoinCall Number.			
Intercom Number	Set Intercom Number.			
Unregister On Boot	Whether to enable logout function.			
Enable MAC Header	Whether to open the registration of SIP package			
	with user agent with MAC or not.			
Enable Register MAC Header	Whether to open the registration is user agent			
	with MAC or not.			

BLF Dialog Strict Match	Whether to enable accurate matching of BLF		
	sessions.		
PTime(ms)	Set whether to bring ptime field, default no.		
SIP Global Settings			
Strict Branch	Set up to strictly match the Branch field.		
Enable Group	Set open group.		
Enable RFC4475	Set to enable RFC4475.		
Enable Strict UA Match	Enable strict UA matching.		
Registration Failure Retry Time	Set the registration failure retry time.		
Local SIP Port Modify the phone SIP port.			
Enable uaCSTA	Set to enable the uaCSTA function.		

12.4 Line >> SIP Hotspot

Please refer to 9.9 SIP Hotspot.

12.5 Line >> Dial Plan

V	Press # to invoke dialing		0
	Dial Fixed Length 11	to Send	C
V	Send after 10	second(s)(3~30)	0
	Press # to Do Blind Transfe	er	C

	Attended Transfer on Onho	ook	C
	Attended Transfer on Conf	erence Onhook	C
100	Enable E.164		0

Picture 112 - Dial plan settings

Table '	19 -	Phone	7	dialing	methods
---------	------	-------	---	---------	---------

Parameters	Description
Press # to invoke dialing	The user dials the other party's number and then
	adds the # number to dial out;
Dial Fixed Length	The number entered by the user is automatically
	dialed out when it reaches a fixed length
Timeout dial	The system dials automatically after timeout
Press # to Do Blind Transfer	The user enters the number to be transferred
	and then presses the "#" key to transfer the
	current call to a third party

Blind Transfer on Onhook	After the user enters the number, hang up the
	handle or turn off the hands-free function to
	transfer the current call to a third party.
Attended Transfer on Onhook	Hang up the handle or press the hands-free
	button to realize the function of attention
	-transfer, which can transfer the current call to a
	third party.
Attended Transfer on Conference Onhook	During a three-way call, hang up the handle and
	the remaining two parties remain on the call.
Enable E.164	Please refer to e. 164 standard specification

Add dialing rules:

	Digit Map	Call Match	h to Send	Line	Alias Type:Nu	umbor/lo	nath)	Cuff	ix Media

Picture 113 - Custom setting of dial - up rules

Parameters	Description
Dial rule	There are two types of matching: Full Matching
	or Prefix Matching. In Full matching, the entire
	phone number is entered and then mapped per
	the Dial Peer rules.
	In prefix matching, only part of the number is
	entered followed by T. The mapping with then
	take place whenever these digits are dialed.
	Prefix mode supports a maximum of 30 digits.

Table 20 - Dial - up rule configuration table

Note: Two different special characters are used.

- x -- Matches any single digit that is dialed.
- [] -- Specifies a range of numbers to be matched. It may be a range, a list of ranges separated by commas, or a list of digits.

Destination	Set Destination address. This is for IP direct.
Port	Set the Signal port, and the default is 5060 for
	SIP.
Alias	Set the Alias. This is the text to be added,
	replaced or deleted. It is an optional item.

Note: There are four types of aliases.

- all: xxx xxx will replace the phone number.
- add: xxx xxx will be dialed before any phone number.
- del –The characters will be deleted from the phone number.

■ rep: xxx – xxx will be substituted for the specified characters.

Suffix	Characters to be added at the end of the phone
	number. It is an optional item.
Length	Set the number of characters to be deleted. For
	example, if this is set to 3, the phone will delete
	the first 3 digits of the phone number. It is an
	optional item.

This feature allows the user to create rules to make dialing easier. There are several different options for dialing rules. The examples below will show how this can be used.

Example 1: All Substitution -- Assume that it is desired to place a direct IP call to IP address 172.168.2.208. Using this feature, 123 can be substituted for 172.168.2.208.

-define	ed Dial Pla	n Tab	le 🕜				
Index	Digit Map	Call	Match to Send	Line	Alias Type:Number(length)	Suffix	Media
1	"123"	Out	No	SIP DIALPEER(172.16.1.15:5560)			Default

Picture 114 - Dial rules table (1)

Example 2: Partial Substitution -- To dial a long distance call to Beijing requires dialing area code 010 before the local phone number. Using this feature 1 can be substituted for 010. For example, to call 62213123 would only require dialing 162213123 instead of 01062213123.

Index	Digit Map	Call	Match to Send	Line	Alias Type:Number(length)	Suffix	Media
1	"1T"	Out	No	Fanvil@SIP1	rep:010(1)		Defaul

Picture 115 - Dial rules table (2)

Example 3: Addition -- Two examples are shown. In the first case, it is assumed that 0 must be dialed before any 11 digit number beginning with 13. In the second case, it is assumed that 0 must be dialed before any 11 digit number beginning with 135, 136, 137, 138, or 139. Two different special characters are used.

x -- Matches any single digit that is dialed.

[] -- Specifies a range of numbers to be matched. It may be a range, a list of ranges separated by commas, or a list of digits.

12.6 Line >> Action Plan

When calling to a phone, the bounded IP camera synchronously transmits video to the opposite phone (video support).

Table 21 - IP camera

Parameter	Description
Number	Auxiliary phone number (support video)
Туре	Support video display on call.
Direction	For call mode, incoming/outgoing call displays
	video
Line	Set up outgoing lines.
Username	Bind the user name of the IP camera.
Password	Bind IP camera password.
URL	Video streaming information.
User Agent	Set user agent information

12.7 Line >> Basic Settings

Set up the register global configuration.

Table 22 - Set the line global configuration on the web page

Parameters	Description
STUN Settings	
Server Address	Set the STUN server address
Server Port	Set the STUN server port, default is 3478
Binding Period	Set the STUN binding period which can be used
	to keep the NAT pinhole opened.
SIP Waiting Time	Set the timeout of STUN binding before sending
	SIP messages
Certification File	
TLS Certification File	Upload or delete the TLS certification file used
	for encrypted SIP transmission.

12.8 Phone settings >> Features

Configuration phone features.

Table	23 -	General	function	Settings
-------	------	---------	----------	----------

Parameters	Description
Basic Settings	
Enable Call Waiting	Enable this setting to allow user to take second
	incoming call during an established call. Default
	enabled.
Enable Call Transfer	Enable Call Transfer.
Semi-Attended Transfer	Enable Semi-Attended Transfer by selecting it
Enable 3-Way Conference	Enable 3-way conference by selecting it
Enable Auto Onhook	The phone will hang up and return to the idle
	automatically at hands-free mode
Auto Onhook Time	Specify Auto Onhook time, the phone will hang
	up and return to the idle automatically after Auto
	Hand down time at hands-free mode, and play
	dial tone Auto Onhook time at handset mode
Ring for Headset	Enable Ring for Handset by selecting it, the
	phone plays ring tone from handset.
Auto Headset	Enable this feature, headset plugged in the
	phone, user press 'answer' key or line key to
	answer a call with the headset automatically.

Enable Silent Mode	When enabled, the phone is muted, there is no ringing when calls, you can use the volume keys and mute key to unmute.	
Disable Mute for Ring	When it is enabled, you can't mute the phone	
Enable Default Line	If enabled, user can assign default SIP line for dialing out rather than SIP1.	
Enable Auto Switch Line	Enable phone to select an available SIP line as default automatically	
Default Ext Line	Select the default line to use for outgoing calls	
Ban Outgoing	If you select Ban Outgoing to enable it, and you cannot dial out any number.	
Hide DTMF	Configure the hide DTMF mode.	
Enable CallLog	Select whether to save the call log.	
Enable Restricted Incoming List	Whether to enable restricted call list.	
Enable Allowed Incoming List	Whether to enable the allowed call list.	
Enable Restricted Outgoing List	Whether to enable the restricted allocation list.	
Enable Country Code	Whether the country code is enabled.	
Country Code	Fill in the country code.	
Area Code	Fill in the area code.	
Enable Number Privacy	Whether to enable number privacy.	
Match Direction	Matching direction, there are two kinds of rules	
	from right to left and from left to right.	
Start Position	Open number privacy after the start of the hidden location.	
Hide Digits	Turn on number privacy to hide the number of digits.	
Allow IP Call	If enabled, user can dial out with IP address	
P2P IP Prefix	Prefix a point-to-point IP call.	
Caller Name Priority	Change caller ID display priority.	
Emergency Call Number		
Search path	Select the search path.	
LDAP Search	Select from with one LDAP for search	
	Configure the Emergency Call Number. Despite	
Emergency Call Number	the keyboard is locked, you can dial the	
	emergency call number	
Restrict Active URI Source IP	Set the device to accept Active URI command	
	from specific IP address. More details please	
	refer to this link	

Push XML Server	Configure the Push XML Server, when phone receives request, it will determine whether to display corresponding content on the phone which sent by the specified server or not.
Enable Pre-Dial	Disable this feature, user enter number will open audio channel automatically. Enable the feature, user enter the number without opening audio channel.
Enable Multi Line	If enabled, up to 10 simultaneous calls can exist on the phone, and if disabled, up to 2 simultaneous calls can exist on the phone.
Line Display Format	Custom line format: SIPn/SIPn: xxx/xxx@SIPn
Contact As White List Type	NONE/BOTH/DND White List/FWD White List
Block XML When Call	Disable XML push on call.
SIP notify	When enabled, the phone displays the information when it receives the relevant notify content.
Tone Settings	
Enable Holding Tone	When turned on, a tone plays when the call is held
Enable Call Waiting Tone	When turned on, a tone plays when call waiting
Play Dialing DTMF Tone	Play DTMF tone on the device when user pressed a phone digits at dialing, default enabled.
Play Talking DTMF Tone	Play DTMF tone on the device when user pressed a phone digits during taking, default enabled.
DND Settings	
DND Option	Select to take effect on the line or on the phone or close.
Enable DND Timer	Enable DND Timer, If enabled, the DND is automatically turned on from the start time to the off time.
	Set DND Start Time
DND Start Time	
DND Start Time DND End Time	Set DND End Time

Value	Set the value to specify the ring type.
Ring Type	Туре1-Туре9

12.10 Phone settings >> MCAST

This feature allows user to make some kind of broadcast call to people who are in multicast group. User can configure a multicast DSS Key on the phone, which allows user to send a Real Time Transport Protocol (RTP) stream to the pre-configured multicast address without involving SIP signaling. You can also configure the phone to receive an RTP stream from pre-configured multicast listening address without involving SIP signaling. You can specify up to 10 multicast listening addresses.

Table 25 - Multicast parameters

Parameters	Description
Normal Call Priority	Define the priority of the active call, 1 is the
	highest priority, 10 is the lowest.
Enable Page Priority	The voice call in progress shall take precedence
	over all incoming paging calls.
Name	Listened multicast server name
Host: port	Listened multicast server's multicast IP address
	and port.

12.11 Phone settings >> Action

Action URL

Note! Action urls are used for IPPBX systems to submit phone events. Please refer to Fanvil Action URL for details.

12.12 Phone settings >> Time/Date

The user can configure the time Settings of the phone on this page.

Parameters	Description
Network Time Server Settings	
Time Synchronized via SNTP	Enable time-sync through SNTP protocol
Time Synchronized via DHCP	Enable time-sync through DHCP protocol
Primary Time Server	Set primary time server address
Secondary Time Server	Set secondary time server address, when

Table 26 – Time & Date settings

	primary server is not reachable, the device will	
	try to connect to secondary time server to get	
	time synchronization.	
Time Zone	Select the time zone	
Resync Period	Time of re-synchronization with time server	
12-Hour Clock	Set the time display in 12-hour mode	
Date Format	Select the time/date display format	
Daylight Saving Time Settings

Dial Recall Tone:	350+440/100,0/100,350+440/100,0/100,350+440/100,0/100,350+440/0	
Measage Tone:		
Howler Tone:		
Number Unobtainable Tone:	400/500,0/6000	
Warning Tone:	1400/500,0/0	
Record Tone:	440/500,0/5000	
Auto Answer Tone:		

Picture 116 - Tone settings on the web

12.14 Phone settings >> Advanced

User can configure the advanced configuration settings in this page.

- Screen Configuration.
 - Enable Energy Saving
 - Backlight Time
 - Screen Saver
- LCD Menu Password Settings.

The password is admin by default.

- Keyboard Lock Settings.
- Configure Greeting Words

The greeting message will display on the top left corner of the LCD when the device is idle, which is limited to 16 characters. The default chars are 'VOIP PHONE'.

12.15 Phonebook >> Contact

User can add, delete, or edit contacts in the phonebook in this page. User can browse the phonebook and sorting it by name, phones, or filter them out by group.

To add a new contact, user should enter contact's information and press "Add" button to add it.

To edit a contact, click on the checkbox in front of the contact, the contact information will be copied to the contact edit boxes, press "Modify" button after finished editing.

To delete one or multiple contacts, check on the checkbox in front of the contacts wished to be deleted and click the "Delete" button, or click the "Clear" button with selecting any contacts to clear the phonebook.

User can also add multiple contacts into a group by selecting the group in the dropdown options in front of "Add to Group" button at the bottom of the contact list, selecting contacts with checkbox and click "Add to Group" to add selected contacts into the group. Similarly, user can select multiple users and add them into blacklist by click "Add to Blacklist" button.

12.16 Phonebook >> Cloud phonebook

Cloud Phonebook

User can configure up to 8 cloud phonebooks. Each cloud phonebook must be configured with an URL where an XML phonebook is stored. The URL may be based on HTTP/HTTPs or FTP protocol with or without authentication. If authentication is required, user must configure the username and password.

To configure a cloud phonebook, the following information should be entered,

Phonebook name (must) Phonebook URL (must) Access username (optional) Access password (optional)

LDAP Settings

The cloud phonebook allows user to retrieve contact list from a LDAP Server through LDAP protocols.

User must configure the LDAP Server information and Search Base to be able to use it on the device. If the LDAP server requests an authentication, user should also provide username and password.

To configure a LDAP phonebook, the following information should be entered,

Display Title (must) LDAP Server Address (must) LDAP Server Port (must) Search Base (must) Access username (optional) Access password (optional)

Note! Refer to the LDAP technical documentation before creating the LDAP phonebook and phonebook server.

Web page preview

Phone page supports preview of Internet phone directory and contacts

- After setting up the XML Voip directory or LDAP,
- Select [Phone book] >> [Cloud phone book] >> [Cloud phone book] to select the type.
- Click the set XML/LDAP to download the contact for browsing.

12.17 Phonebook >> Call List

Restricted Incoming Calls:

It is similar like a blacklist. Add the number to the blacklist, and the user will no longer receive calls from the stored number until the user removes it from the list.

Users can add specific Numbers to the blacklist or add specific prefixes to the blacklist to block calls with all Numbers with this prefix.

Allowed Incoming Calls:

When DND is enabled, the incoming call number can still be called.

Restricted Outgoing Calls:

Adds a number that restricts outgoing calls and cannot be called until the number is removed from the table.

12.18 Phonebook >> Web Dial

Use web pages for call, reply, and hang up operations.

12.19 Phonebook >> Advanced

Users can export the local phone book in XML, CSV, and VCF format and save it on the local computer.

Users can also import contacts into the phone book in XML, CSV, and VCF formats.

Attention! If the user imports the same phone book repeatedly, the same contact will be ignored. If the name is the same but the number is different, the contact is created again.

Users can delete groups or add new groups on this page. Deleting a contact group will not delete contacts in that group.

12.20 Call Logs

The user can browse the complete call record in this page. The call record can be sorted by time, call number, contact name or line, and the call record can be screened by call record type (incoming call, outgoing call, missed call, forward call).

The user can also save the number in the call record to his/her phone book or add it to the blacklist/whitelist.

Users can also dial the web page by clicking on the number in the call log. Users can also download call records conditionally and save them locally.

12.21 Function Key >> Function Key

Function Key Configuration:

One-key transfer Settings: establish new call, blind transfer, attention-transfer, one-key three-party, Play DTMF.

DSS Key home page: None/Page1/Page2/Page3/Page4

The device provides 112 user-defined shortcuts that users can configure on a web page.

Parameters	Description				
Memory Key	BLF (NEW CALL/BXFE /AXFER): It is used to prompt user the				
	state of the subscribe extension, and it can also pick up the				
	subscribed number, which help user monitor the state of subscribe				
	extension (idle, ringing, a call). There are 3 types for one-touch				
	BLF transfer method.				
	p.s. User should enter the pick-up number for specific BLF key to				
	fulfill the pick-up operation.				
	Presence: Compared to BLF, the Presence is also able to view				
	whether the user is online.				
	Note: You cannot subscribe the same number for BLF and				
	Presence at the same time				
	Speed Dial: You can call the number directly which you set. This				
	feature is convenient for you to dial the number which you				
	frequently dialed.				
	Intercom: This feature allows the operator or the secretary to				
	connect the phone quickly; it is widely used in office environments.				
Line	It can be configured as a Line Key. User is able to make a call by				
	pressing Line Key.				
Key Event	User can select a key event as a shortcut to trigger.				
	For example: MWI / DND / Release / Headset / Hold / etc.				
DTMF	It allows user to dial or edit dial number easily.				
URL	Open the specific URL directly.				
Multicast	Configure the multicast address and audio codec. User presses				
	the key to initiate the multicast.				
Action URL	The user can use a specific URL to make basic calls to the phone.				
XML browser	Users can set the DSS Key for specific URL download and other				
	operations.

12.23 Function Key >> Advanced

■ Global key Settings

The default configuration is empty, and the global memory key function can be configured.

The configured memory key has a call path. If the global configuration is maintained, pressing the memory key again will maintain the call path. If the same configuration hung up, press the memory key again will hang up this road call.

Programmable key Settings

Please refer to the Table 28 Softkey configuration

12.24 Application >> Manage Recording

See <u>9.3 Record</u> for details of recording.

12.25 Security >> Web Filter

The user can set up a configuration management phone that allows only machines with a certain network segment IP access.

Add

Start IP Address	End IP Address	Option
eb Filter Table Settings		
Start IP Address	📀 End IP Address	Add
/eb Filter Setting 🕜		
Enable Web Filter 🗐	Apply	
	Picture 119 - Web Filter settings	5

Picture 120 - Web Filter Table

End IP Address

192.168.254.254

0

Add and remove IP segments that are accessible; Configure the starting IP address within the start IP, end the IP address within the end IP, and click [Add] to submit to take effect. A large network segment can be set, or it can be divided into several network segments to add. When deleting, select the initial IP of the network segment to be deleted from the drop-down menu, and then click [Delete] to take effect.

Enable web page filtering: configure enable/disable web page access filtering; Click the "apply" button to take effect.

Note: if the device you are accessing is in the same network segment as the phone, please do not configure the filter segment of the web page to be outside your own network segment, otherwise you will not be able to log in the web page.

12.26 Security >> Trust Certificates

Set whether to open license certificate and general name validation, select certificate module.

You can upload and delete uploaded certificates.

> Device Log	Rule Delete Option @ Input/Output Index To Be Deleted Delete

Picture 123 - Network firewall Settings

Through this page can set whether to enable the input, output firewall, at the same time can set the firewall input and output rules, using these Settings can prevent some malicious network access, or restrict internal users access to some resources of the external network, improve security.

Firewall rule set is a simple firewall module. This feature supports two types of rules: input rules and output rules. Each rule is assigned an ordinal number, allowing up to 10 for each rule.

Considering the complexity of firewall Settings, the following is an example to illustrate:

Parameter	Description
Enable Input Rules	Indicates that the input rule application is enabled.
Enable Output Rules	Indicates that the output rule application is enabled.
Input/Output	To select whether the currently added rule is an input or
	output rule.
Deny/Permit	To select whether the current rule configuration is disabled
Deny/Fernin	or allowed;
Protocol	There are four types of filtering protocols: TCP UDP
FIOLOCOI	ICMP IP.
Src Port Range	Filter port range
	Source address can be host address, network address, or
Src Address	all addresses 0.0.0.0; It can also be a network address
	similar to *.*.*.0, such as: 192.168.1.0.

Table 29 - Network Firewall

	The destination address can be either the specific IP
Dst Address	address or the full address 0.0.0.0; It can also be a
	network address similar to *.*.*.0, such as: 192.168.1.0.
	Is the source address mask. When configured as
Src Mask	255.255.255.255, it means that the host is specific. When
SIC WASK	set as 255.255.255.0, it means that a network segment is
	filtered.
	Is the destination address mask. When configured as
Dst Mask	255.255.255.255, it means the specific host. When set as
DSUMASK	255.255.255.0, it means that a network segment is
	filtered.

After setting, click [**Add**] and a new item will be added in the firewall input rule, as shown in the figure below:

wun II	nput Rule Ta							
Index	Deny/Permit	Protocol	Src Address	Src Mask	Src Port Range	Dst Address	Dst Mask	Dst Port Range
1	deny	udp	192.168.1.0	192.168.1.154	0-9	255.255.255.0	255.255.255.0	0-9

Picture 124 - Firewall Input rule table

Then select and click the button [Apply].

In this way, when the device is running: ping 192.168.1.118, the packet cannot be sent to 192.168.1.118 because the output rule is forbidden. However, other IP of the ping 192.168.1.0 network segment can still receive the response packet from the destination host normally.

Rule Delete Option 💡			
Input/Output	input 🔻	Index To Be Deleted	Delete

Picture 125 - Delete firewall rules

Select the list you want to delete and click [Delete] to delete the selected list.

12.29 Device Log >> Device Log

You can grab the device log, and when you encounter an abnormal problem, you can send the log to the technician to locate the problem. See <u>13.6 Get log information</u>.

Table 30 -Input and Output Parameters

13 Trouble Shooting

When the phone is not in normal use, the user can try the following methods to restore normal operation of the phone or collect relevant information and send a problem report to Fanvil technical support mailbox.

13.1 Get Device System Information

Users can get information by pressing the [**Menu**] >> [**Status**] option in the phone.The following information will be provided:

The network information

Equipment information (model, software and hardware version), etc.

13.2 Reboot Device

Users can reboot the device from soft-menu, [**settings**] >> [**reboot**], and press [**Reboot**], Or simply remove the power supply and restore it again.

13.3 Reset Device to Factory Default

Reset Device to Factory Default will erase all user's configuration, preference, database and profiles on the device and restore the device back to the state as factory default. To perform a factory default reset, user should press [setting]>>[Advanced]>> [maintain]. Then choose [Phone Reset] and press [Reset]. The device will be rebooted into a clean factory default state.

13.4 Screenshot

If there is a problem with the phone, the screenshot can help the technician locate the function and identify the problem. In order to obtain screen shots, log in the phone webpage [**System**] >> [**Tools**], and you can capture the pictures of the main screen (you can capture them in the interface with problems).

	Information Account	Configurations Upgrad	e Auto Provision	Tools	Reboot Phone

Picture 127 - Screenshot

13.5 Network Packets Capture

Sometimes it is helpful to dump the network packets of the device for issue identification. To get the packets dump of the device, user needs to log in the device web portal, open page [**System**] >> [**Tools**] and click [**Start**] in "Network Packets Capture" section. A pop-up message will be prompt to ask user to save the capture file. User then should perform relevant operations such as activate/deactivate line or making phone calls and click [**Stop**] button in the web page when operation finished. The network packets of the device during the period have been dumped to the saved file.

	Information	Account	Configurations	Upgrade	Auto Provision	Tools	Reboot Phone

› Call logs	Start Screenshot	1	stop				
Function Key	Main Screen:		Save BMP				
> Application	Watch Dog						

Picture 128 - Web capture

User may examine the packets with a packet analyzer or send it to Fanvil support mailbox.

1,815 KB

13.6 Get Log Information

Log information is helpful when encountering an exception problem. In order to get the log information of the phone, the user can log in the phone web page, open the page [**Device log**], click the [**Start**] button, follow the steps of the problem until the problem appears, and then click the [**End**] button, [**Save**] to local analysis or send the log to the technician to locate the problem.

Or use a thumb drive to export debugging log, find a thumb drive to place a text document named fv-ipphone-dump-trace.txt,

	Every of E title t	~T~H	×
FV-IPPhone-Dump-Trace.txt	2020/3/2 17:21	文本文档	0 KB

Plug in the USB port and wait for about 3 minutes. The usb flash drive automatically generates log files.

13.7 Common Trouble Cases

Trouble Case		lution
Device could not boot up	1.	The device is powered by external power supply via power
		adapter or PoE switch. Please use standard power adapter
		provided by Fanvil or PoE switch met with the specification
		requirements and check if device is well connected to power
		source.
	2.	If you saw "POST MODE" on the device screen, the device
		system image has been damaged. Please contact location
		technical support to help you restore the phone system.
Device could not register to a	1.	Please check if device is well connected to the network. The
service provider		network Ethernet cable should be connected to the
		[Network] port NOT the 💻 [PC] port. If the cable is not well
		connected to the network icon [WAN disconnected] will be
		flashing in the middle of the screen.
	2.	Please check if the device has an IP address. Check the system

Table 31 - Trouble Cases

	information, if the IP displays "Negotiating", the device does not
	have an IP address. Please check if the network configurations is
	correct.
	3. If network connection is fine, please check again your line
	configurations. If all configurations are correct, please kindly
	contact your service provider to get support, or follow the
	instructions in " <u>13.5 Network Packet Capture</u> " to get the network
	packet capture of registration process and send it to Fanvil
	support to analyze the issue.
Audio is chopping at far-end	This is usually due to loud volume feedback from speaker to
in Hands-free speaker mode	microphone. Please lower down the speaker volume a little bit, the
	chopping will be gone.
